Citizen Launches LinkServer™ for Photo – Free of charge software that unlocks the full potential of your Citizen photo printer

Citizen Systems Europe, a leading manufacturer of professional dye-sublimation photo printers, is proud to announce the release of LinkServer™ for Photo, a utility software designed exclusively for Citizen photo printers. This free software enhances your printing experience, maximising both efficiency and quality for all your photographic printing needs.

LinkServer™ for Photo has been designed to help users simplify their photo printing processes with their Citizen photo printers. The programme contains invaluable features such as real-time printer management, HotFolder automation, panoramic printing, printer diagnostics, and print customisation.

The user-friendly interface has been designed for beginners and professionals alike, making it suitable for an array of applications. The main goal of LinkServer™ for Photo is to make life easier for Citizen users.

Event photography and any other on-site photography applications can be problematic when operating multiple photo printers. LinkServer™ for Photo

makes printer operation easier with its real-time printer management.

When using multiple Citizen printers, simply connect them to a PC by USB. The software then automatically detects all installed Citizen photo printers and compiles them into one easy-to-view dashboard. The simple dashboard then allows you to see remaining prints, media sizes, print counts and printer statuses all in one place.

When using multiple printers, it can be difficult to set up an efficient, balanced and optimised printing queue. LinkServer™ for Photo can change all of that.

The LinkServer™ for Photo HotFolder feature allows users to designate a folder for image files to automatically print. Third-party applications can be used to drop images into subfolders corresponding to the print size. Once dropped into the HotFolder, LinkServer™ for Photo balances the print jobs across available printers, ensuring all photos are printed efficiently.

LinkServer™ for Photo gives users the ability to easily print panoramic photos in a range of sizes for CX-02 and CX-02W users.

Gary Andrews, EMEA Business Director for Photo, states that “giving customers the ability to unlock the full potential of their Citizen photo printers is a true game changer. LinkServer™ for Photo helps customers

optimise and streamline photo printing processes through its print management features. Not only is the new software full of advanced features – it's free to download too, making it accessible no matter what size your photo business is."

LinkServer™ for Photo is compatible with Windows operating systems, is already available and can be downloaded for free on the Citizen Systems website [here](#).
