

Prioritize Patient Safety.

One of the potential problems in healthcare today are data errors on prescription labels. Transposition or transcription errors occur when digits or letters are used in the wrong order or are mistakenly written. With healthcare professionals working overtime, handwritten mistakes can happen, increasing the risk to patient safety.

Eliminate both transcription and transposition errors by using value-based, high-performance thermal print technology from Citizen's robust line of label printers.

Ensure Patient Safety with Labels:

- Reliable 203 or 300 DPI print resolution for precise printing.
- Clear 1D and 2D barcodes to ensure proper scanning.
- Up to 4inch wide media for Rx labels or large instructions.
- ZPL® Compatible, for ease of integration to the hospital information system (H-I-S).
