Remarks for Windows CE driver installation

Driver for Windows CE 5.0 (4.x) and for 6.0 are different.

If the version does not match, driver does not work on Windows CE or Windows Mobile machine.

Run the installer file on the Windows PC that is connected / synchronized with Windows CE device by ActiveSync.

By running the installer, "CMP-20/30" folder is created under "Program Files" => "CITIZEN" folder.

And in the "CMP-20/30" folder, setup files such as "CMP-20ARMV4(i)Setup" are located.

(Depending on the CPU, executable file is different. Try each file to find suitable one.)

Run the setup file on WinCE device to configure the environment such as port, paper size etc. for communication and printing. (COMx assigned to Bluetooth should be used for the port.)

Printer dialogue called from application software uses the configuration setting as default.

Setup can allow the logo registration and test printing as well.
